Subject : Processes for the Manufacture of Lube Oils

We are in receipt of your letter 009L/CGL dated August 30, 1993

Please be informed that We are presently engaged in the feasibility studies for installation of a Lube Oil Complex in Iran in the capacity range of 100,000 metric tones/year of finished Lube Oil. Our existing facilities consist of furfural extraction followed by MEK dewaxing with the associated downstream facilities.

Considering the recent technologies in the Lube Oil manufacturing processes, we would appreciate to receive your experience and technical literature on the subject matter, with specific comments on the hydrocracking of lube feed in comparison to solvent extraction.

A comparison on the investment cost, operating cost, product qualities, yields service factors, etc., for different process configurations will be highly appreciated.

Data on the units installed or under design and your experience on the same will be helpful in the decision making stage.

Your cooperation in this regard will be highly appreciated.

VERY TRULY YOURS

A. HARIRI

Deputy Director Engr. & Const.

CC. : Mgr. Design & Engr.
